An International Journal

Subject Index to Volume 36, 2000

Activity network, complexity, 47
Activity-on-arc project network, 47
Aggregation approach, network p-median problem with link demands, 233
Almost-optimal approximation algorithms, 203
Approximation algorithms, 114, 147, 172
Asymmetric traveling salesman problem with time windows, 69
Asynchronous transfer mode, 210

Backbone network, 210
Bipartite graphs, 210
Butterfly network, 91, 191

Cardinality-constrained shortest path problem, 1
Cellular communication system, 114
Channel assignment, 114
Chordal ring networks, fault-tolerant routings, 180
Clique lifting, 34
Cloning, 34
Combinatorial optimization, 138
Complexity index, 47
Compounding method, 126
Congestion, 191
2-connected graph, augmenting, 172
Connected graphs, 17
Constrained length connectivity, 17
Container theory, 17
Convex cost-flow problem, 53
Covering problems, 147
Cube-connected cycle, 191
Curve approximation, 1
Cycle-canceling algorithm, 53
Cycle polytope, 34

Dense digraphs, 164
Depth-first search, 96
Dijkstra's algorithm, 80, 156
Directed graph, 34
Direction ignorance sensitivity, 96
Double-loop network, 118
Dual variables, 9
Dummy arcs, 47
Dynamic programming, 1

Edge-forwarding index, 191
Equivalence of inequalities, 34
Euclidean algorithm, 118
Exploration algorithms, 96

Facet lifting, 34
Fastest paths, 80
Fault-tolerance, 17
Fault-tolerant routings, chordal ring networks, 180
Flow graphs, 17
Full-degree spanning tree problem, 203

Gossip graphs, compounding, 126
Graph diameter, 147
Graph drawing, 91
Graphs
  exploration efficiency, 96
  p-point, q-line, 64
  Tabu search, 138
Graph Voronoi diagram, 156
Grid layout, 91

Hamiltonian-laceability, star graphs, 210
Hamiltonian path, 210
Hexagonal cells, 114
Hypercubelike networks, 191

Integer optima, 9
Interconnection networks, embedding in grids, 91
Internet protocol, 210
Interval routing, low-congested, 191

Knödel graph, 126
K-way split method, 126

Label-setting algorithm, 80
Lagrangian relaxation, 1
Large constructions, 164
Layered cross product, 91
Length constraints, 17
Linear cost model, 126
Linear programming, 1
Line connectivity, 64
Link aggregation, 233
Link demands, 233
Link travel, linear-speed assumption, 80
Local access network, 210
Local area networks, double-loop, 118
Local search, 138
Local Steiner problem, 104

Longest path, 210
L-shape, nondegenerate, 118

Map ignorance sensitivity, 96
Maranzana heuristic, 233
Mesh-of-trees, 91
Metaheuristics, 138
Metropolitan area network expansion problem, 210
Minimum-cost flows, 53
Minimum-diameter covering problems, 147
Minimum gossip graphs, 126
Minkowski planes, 104
Modular switch, 210
Moore bound, 164
Multicommodity problems, 9
Multiple-choice cover problem, 147
Multiple-ring metropolitan area networks, 210
Multiroot 3-outconnected subgraphs, 172

Network area, 91
Network complexity index, 47
Network design, 9
Network flows, 53
Network location, 233
Network vulnerability, 64
Normed planes, local Steiner problem, 104
NP-complete, 147
NP-hardness, 203

Pair-choice 2-partition problem, 147
PD-INREACH, 80
PERT network analysis, 47
Plane tessellations, 180
p-median, 233
Polyhedral theory, 69
Polynomial time combinatorial algorithm, 114
Polynomial-time cycle-canceling algorithms, 53
Polytopes, 1
  cycle, 34
Projection, 34
  methodology, 91

Radio channel assignment, 114
Realizability theorem, 64
Rooted 3-outconnected subgraphs, 172
Routing vulnerability, 180

Scaling algorithms, 53
Series-parallel, 47
Shortest path optimality conditions, 53
Shortest path problem, 156
  cardinality-constrained, 1
Shortest-time path, 80
Sign coloring, 164
Single-machine scheduling problems, 69
Spanning tree, full-degree, 203
Stable graphs, 17
Star graphs, Hamiltonian-laceability, 210
Steiner minimum tree, 104
Steiner problem
  local, 104
  Tabu search, 138
Strongly polynomial algorithms, 53
Survivable network design problem, 172
Survivable networks, 17

Tabu algorithm, 138, 210
Teitz and Bart heuristic, 233
Telecommunications, 17
Time-dependent networks, 80
Time windows, 69
Topographic information, 96
Topological expansion, 210
Travel, time-varying link speeds, 80
Traveling salesman polytope, 34
Traveling salesman problem, asymmetric, with time windows, 69
Triangular lattice, 114
Triple-loop graphs, 180
Two-commodity network design, 9

Uncapacitated networks, 53
Unilateral Moore digraphs, 164
Unit-cost model, 126

Valid inequalities, 69
Vehicle routing, 80
Vehicle scheduling, 80
Vertex splitting, 164
Voltage graphs, 164
Voronoi diagram, 156

Weighted coloring, 114

X-planes, 104
